INFORMATION ON THE CARBON FOOTPRINT OF THE CANPACK GROUP IN 2022

As one of the key packaging producers, CANPACK understands its impact on the environment and recognizes its responsibility for the condition of the environment. Since 2017, we have been calculating our carbon footprint, quantifiably expressing the company's impact on the climate as well as other indicators of sustainable development and circular economy.

Regular carbon footprint measurement enables us to identify the areas of our activity with the greatest potential to generate emissions and, consequently, to search for opportunities to optimize our processes, implement new effective solutions and undertake sustainable-oriented initiatives and investments.

Recognizing that companies have a key role to play in supporting the climate transition at the pace and scale required by the Paris Agreement, in 2022 CANPACK has set emission reduction targets grounded in climate science. In this way, we want to contribute to the fight against climate change and ensure a thriving, sustainable economy.

Following its commitments and maintaining transparency in business relations, CANPACK wants to share its carbon footprint results for 2022 with its investors, customers and other stakeholders. The calculation is based on the methodology developed by CANPACK and publicly available at the [LINK](#). The independent limited assurance of emission factors was carried out by an independent third party, Deloitte Audyt sp. z o.o. sp.k.

One of the first and radical actions for the climate that the company took in 2022. was the transition to the purchase of 100% energy from renewable sources, the effects of which can be seen in drastically reduced emissions in Scope 2 (a decrease of 97% compared to 2021). The company takes further steps to increase the efficiency of utilities and raw material consumption despite the growing scale of operations, and thus reduce the carbon footprint and get closer to its Science Based Targets set for 2030.

Table 1: Selected metrics within the scope of limited assurance for the year ending 31 December 2022

| Greenhouse gas (GHG) emissions in 2022 [tCO₂eq.] | |
|--|---------------------|
| Scope 1 (direct) | 299,764.69 |
| Scope 2 (Indirect – location based) | 386,584.17 |
| Scope 2 (Indirect – market based) | 10,127.83 |
| Scope 1+2 (location based) | 686,348.86 |
| Scope 1+2 (market based) | 309,892.52 |
| Scope 3 (Category: Purchased goods and services) | 4,215,819.65 |
| Scope 3 (Category: Upstream transportation and distribution) | 107,829.72 |
| Scope 3 (Category: Downstream transportation and distribution) | 98,830.25 |
| Scope 3 (Category: Fuel and energy-related activities) | 70,324.15 |
| Scope 3 (Category: Capital goods) | 36,368.21 |
| Scope 3 (Category: Waste generated in operations) | 34,101.54 |
| Scope 3 (Category: Employee commuting) | 15,079.78 |
| Scope 3 (Category: Business travel) | 2,360.13 |
| Scope 3 (Category: Downstream leased assets) | 61.18 |
| Scope 3 | 4,580,774.61 |
| Total GHG emissions (location based) | 5,267,123.48 |
| Total GHG emissions (market based) | 4,890,667.14 |
